AURORA begins with an ambition:
useful robotics for everyday life.

An ambition taking shape

16

A starting point in Azerbaijan

01

Robotics and AI

An interest in how intelligent systems interact with the physical world.

02

Entrepreneurship

An ambition to build a technology company around useful home assistance.

Why the everyday matters

Less routine work could
leave more time for people.

A disciplined way to learn

01

Understand the home

Listen to users and identify a task worth solving.

02

Build understanding

Study robotics and seek feedback from experienced engineers.

03

Evaluate the result

Use evidence to revise assumptions and choose the next step.

Collaboration shapes the venture

A founder's role

Define a clear purpose.
Invite expertise.
Keep progress honest.

01

Engineers

Challenge feasibility and the proposed safety architecture.

02

Household users

Help define useful tasks and acceptable behavior.

Collaboration is a development principle. No existing team or partnerships are implied.

A long-term vision for home robotics

Develop useful assistance through learning,
engineering and careful validation.
